Oral Health for Your Child

Caring well for your baby's first teeth, your child's first adult teeth and your teens' dental needs is a great start to a lifetime of good oral health.

Nearly 50% of 2-to-19 year-olds in the U.S. have tooth decay.[1] The good news? You can prevent it with good strategies, beginning in the days after your child is born and continuing through each stage of their development.

Healthy baby teeth, healthier adult teeth

It's easy to underestimate the importance of taking care of your baby's teeth. After all, they're not permanent, right? But what baby teeth leave behind can affect oral health in adulthood.

- Infected baby teeth can lead to stained, pitted or weaker adult teeth.
- Baby teeth hold space for the adult teeth that will follow, and a decaying or missing tooth doesn't leave enough space.
- Baby teeth play a critical role in speech development and are essential for proper chewing, which promotes healthy nutrition.

Before your child sees a dentist, it's important for parents to do their part.

- Only fill bottles with water whenever your baby is sleeping, since baby bottle tooth decay can happen if a baby naps or goes to bed with a bottle filled with milk, juice or other sugary drinks.
- If your baby is teething a lot, applying pressure with your finger often helps ease pain, as do frozen washcloths.

Research shows that kids who have their first dental visit before age one have 40% lower dental costs by age five.[2] Everyone should see a dentist twice a year—and babies are no different than adults.

By the numbers—oral care for babies and toddlers

The American Academy of Pediatric Dentists (AAPD) offers the following timeline for a child's first two years:

Birth to 6 months

- Use a soft cloth or gauze to clean baby's gums starting the first few days after birth.
- Ask your child's pediatrician about the need for fluoride supplements.
- Learn the benefits of regulating bottle feeding and breastfeeding habits.

6 months to 1 year

- Schedule an exam with a pediatric dentist when the first tooth appears.
- Brush after each feeding and before bed with a small, soft toothbrush.
- Minimize the potential for dental injuries as your child begins to walk.

1 year to 2 years

- Schedule exams and cleanings every six months, or as recommended by your child's pediatric dentist.
- When your child has mastered rinsing his or her own mouth, and most baby teeth have come in, ask your child's dentist about the best time to begin using toothpaste.

Fluoride makes tooth enamel more resistant to decay. Many communities add fluoride to the water supply. If yours doesn't, or your child only consumes bottled water, the dentist may also recommend a fluoride supplement.

Dental sealants and your growing child

Dental sealants are protective coatings painted onto the surface of the back teeth (molars) and are a great preventive measure for children's permanent teeth, especially if a child has been prone to cavities.

Typically, children get their first molars at or around age 6 and their second molars around age 12. When sealants are applied at these times, they can prevent up to 80% of cavities for two years and 50% of cavities for up to four years.[3]

Applying sealants is quick and easy and can be done by dental professionals in a variety of settings. They first dry the teeth, then apply the sealant, and then use a light to harden the sealant. Afterwards, a child can eat and drink as usual with no restriction.

As a child develops a full adult set of teeth, applying sealants is an effective way not only to prevent cavities, but also to save money on potential dental treatment costs.

Oral health and your teenager

Teenagers face unique dental challenges, whether it's wisdom teeth that need to be pulled, orthodontic treatment or even oral injuries from contact sports.[4] Teens may also experiment with alcohol, tobacco or other drugs, all of which can have negative effects on oral health.

Parents and teens should work with a pediatric dentist that understands these challenges to ensure the best possible care. And no matter what happens in the life of a busy teenager, it remains critical to practice good oral hygiene and get regular dental checkups.

Take the right steps toward good oral health in every stage of your child's life, from the first few days to the teenage years.
